by James R. Hobbs

or Tax Year 1996, the 62,141 domestic corporations each "controlled" by a foreign "person" generated \$1.7 trillion of total receipts and reported \$3.0 trillion of total assets on income tax returns filed with the Internal Revenue Service.

These corporations were few in number, just 1.3 percent of the U.S. total. However, they accounted for 10.7 percent of the receipts and 10.6 percent of the assets reported on all U.S. corporation income tax returns. They also accounted for 8.2 percent of the "taxable income" and 9.0 percent of the total income tax after credits reported on these returns.

The net income (less deficit) reported by foreign-controlled domestic corporations (FCDC's) for tax purposes under the Internal Revenue Code was \$41.9 billion for 1996. This was a small increase over the \$38.5 billion reported for 1995 [1]. Placed in context, the net income (less deficit) reported on all corporation income tax returns increased somewhat faster, from \$714.2 billion for 1995 to \$806.5 billion for 1996 [2].

Of all the FCDC's, 29,115 reported (positive) net income for 1996, totaling \$67.8 billion, a 5.4-percent increase over the \$64.3 billion reported for 1995. The profitable companies for 1996 also reported \$52.8 billion of taxable income after statutory special deductions (i.e., "income subject to tax" shown in the statistics), 22.4 percent more than for 1995. Total statutory special deductions actually decreased between the2 years, although the net operating loss deduction component of that total increased slightly over the same time period. The U.S. tax liability (i.e., "total income tax after credits") of FCDC's was \$15.4 billion, 17.3 percent greater than that of the previous year.

For 1996, the 2,842 "largest" companies (i.e., those with at least \$250 million of assets, or with at least \$50 million of receipts, or with both) accounted for most of the key financial items of all FCDC's: 93.3 percent of total assets, 91.2 percent of total receipts, 88.9 percent of taxable income, and 87.8 percent of total income tax after credits. After an overview of all FCDC's, this article focuses on the largest foreign-controlled domestic companies and

James R. Hobbs is a management official for the Special Studies Branch.

compares them on industry and age bases to the largest domestic corporations not controlled by foreign persons. It also provides information on the foreign country distribution of the owners of the largest FCDC's.

Direct Foreign Investment in the United States

Direct foreign investment in the United States can take several forms, including corporations, partnerships, and even joint ventures. Under these forms of direct investment, the foreign investor may have sufficient equity in the enterprise to control and participate in managing its operations [3]. With regard to corporations, a foreign investor can either gain control of an existing U.S. company, create a new company incorporated in the United States, or operate in the United States through a branch of a foreign corporation.

There are numerous factors involved in the decision of a foreign investor to operate in the United States through either a domestic or foreign corporation [4, 5]. For the foreign-controlled domestic corporations covered in this article, "control" is generally defined as ownership by any foreign person or entity (including an individual, corporation, partnership, estate, or trust), directly or indirectly, of 50 percent or more of a U.S. corporation's voting stock (or the value of all of the corporation's stock) at any time during the accounting period. (This is discussed in greater depth in the Data Sources and Limitations section. Also, a description of foreign persons and an explanation of the rules of ownership attribution are given in the Explanation of Selected Terms section.)

This article includes two basic tables showing balance sheet, income statement, and tax items, as well as various ratios. Table 1 includes information for all FCDC's by selected industrial groupings and selected countries. Country information is based on the location of the owner's country of residence, incorporation, organization, creation, or administration, as reported on tax returns filed with the Internal Revenue Service (IRS). Table 2 presents information on the "largest" FCDC's, classified by selected industrial groupings and countries, and age of the companies. For comparison purposes, this table also contains data for the largest domestic corporations not controlled by foreign persons.

Domestic corporations that are not foreign controlled can file Form 1120, U.S. Corporation Income Tax Return; Form 1120-A, U.S. Corporation Short-Form Income Tax Return; Form 1120-L, U.S. Life Insurance Company Income Tax Return; Form 1120-PC, U.S. Property and Casualty Insurance Company Income Tax Return; Form 1120-REIT, U.S. Income Tax Return for Real Estate Investment Trusts; and Form 1120-RIC, U.S. Income Tax Return for Regulated Investment Companies. FCDC's can also file tax returns on Forms 1120, 1120-L, 1120-PC, 1120-REIT, and 1120-RIC, but not on Form 1120-A. Because FCDC's cannot file Form 1120S, U.S. Income Tax Return for an S Corporation, and because S Corporations are mostly taxable income reporting. but not taxpaying, entities (in that income is taxed to the shareholders), these forms were excluded from the data for domestically-controlled corporations shown in the figures and tables of this article. Also, FCDC's cannot file Form 1120-F, U.S. Income Tax Return of a Foreign Corporation. Data for domestically-controlled corporations shown in this article do not include Form 1120-F, although data for all corporation returns do include this form (as well as Form 1120S) [6].

Foreign-ControlledDomesticCorporations

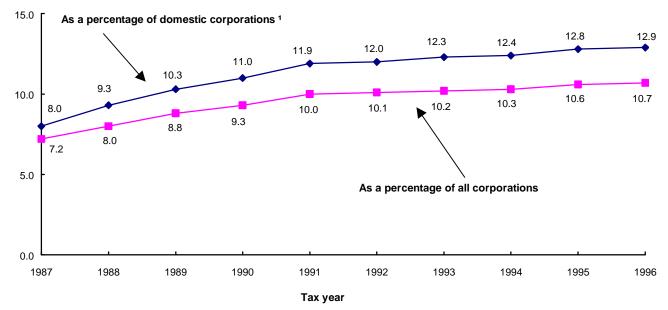

Growth of Corporations

Direct foreign investment in the United States through foreign-controlled domestic corporations grew steadily and substantially during the 1987-1996 period [7]. Total receipts of FCDC's grew from \$0.7 trillion for 1987 to \$1.7 trillion for 1996, a 141.2-percent increase (using current dollars). In comparison, total receipts reported on all U.S. corporation income tax returns grew from \$9.6 trillion for 1987 to \$15.5 trillion for 1996, a 62.1-percent increase. As a result of the rapid growth rate of FCDC's, their share of the receipts reported on all corporate returns increased from 7.2 percent for 1987 to 10.7 percent for 1996 (see Figure A).

FigureA

Foreign-Controlled Domestic Corporations as a Percentage of Other Corporations, Based on Total Receipts, Tax Years 1987-1996

FigureB

Foreign-Controlled Domestic Corporations Compared to Other Domestic Corporations: Net Income (Less Deficit) as a Percentage of Total Receipts, Tax Years 1987-1996

¹ Excludes Forms 1120S, U. S. Income Tax Return for an S Corporation.

The growth of FCDC's can also be measured from the early 1970's, when a question concerning foreign ownership of companies was first placed on the corporation income tax return. For 1971, these companies reported \$39.2 billion of total receipts, just 2.1 percent of the \$1.9 trillion reported for all corporations.

Figure A also shows that FCDC total receipts as a percentage of the total receipts of domestic corporations increased from 8.0 percent for 1987 to 12.9 percent for 1996. While the receipts of FCDC's increased at a greater pace than those of domestic corporations not foreign-controlled during this 10-year period, the profit margin (as measured by the percentage of net income less deficit to total receipts) of FCDC's was consistently lower than that of the other domestic corporations (see Figure B).

Figure B shows the profit margins of foreign-controlled domestic corporations and other domestic corporations for Tax Years 1987 through 1996. The difference in the profit margins of the two groups of corporations increased slightly for 1996. Data from Forms 1120S are excluded from the figure. However, the figure does include data from Forms 1120-

REIT and 1120-RIC. Because of the special nature of real estate investment trusts (REIT's) and regulated investment companies (RIC's), some users of the data might wish to know the profit margins when these corporations are excluded from the calculations. (REIT's and RIC's are discussed in more detail in the "Largest Foreign-Controlled Domestic Corporations: Industry Characteristics section.) The 6.0-percent profit margin of domestic corporations not foreign-controlled is reduced to 4.9 percent when REIT's and RIC's are excluded from the data. However, REIT's and RIC's played a much smaller part for the foreign-controlled domestic corporations, and the 2.5-percent profit margin remains unchanged when these corporations are excluded from the FCDC data.

Figures A and B provide a general comparison of FCDC's to other domestic corporations. However, a more complete comparison requires that the analysis take into account characteristics other than just ownership status, such as the industrial activities, sizes, and ages within the two groups of corporations. Later in this article, this type of comparison is presented for the returns of the "largest" corporations.

There were an estimated 62,141 returns of foreign-controlled domestic corporations for 1996, about a 3.3-percent increase over the 60,157 returns for 1995. (FCDC's, like most other corporations, could file consolidated returns for affiliated groups of domestic corporations. To the extent that they did, the data included in this article actually represent more companies than the stated number of returns.) Returns of FCDC's comprised a rather constant percentage of all U.S. corporation income tax returns, generally between 1.1 percent and 1.3 percent for each year between 1987 and 1996. This is in contrast to the level of receipts, as well as assets, reported by FCDC's over this period. The assets of domestic corporations controlled by foreign persons increased by 10.3 percent between 1995 and 1996, nearly the same as the increase of 10.1 percent for the assets reported on all U.S. corporation income tax returns [8]. The percentage of total corporate assets accounted for by FCDC's remained at 10.6 percent for 1996.

Industry Characteristics

In the preceding section, it was stated that FCDC receipts grew from 7.2 percent of all corporate receipts for 1987 to 10.7 percent for 1996. This growth can be viewed more specifically on an industrial basis. The four most significant industrial divisions (or groups) for FCDC's have been wholesale trade; manufacturing; finance, insurance, and real estate; and services. Using total receipts as the measure, the growth during the 1987-1996 period of FCDC's as a percentage of all corporations for these four groups was: for wholesale trade, 18.9 percent to 22.4 percent; for manufacturing, 8.5 percent to 14.9 percent; for finance, insurance, and real estate, 3.9 percent to 8.0 percent; and for services, 3.0 percent to 5.3 percent. Thus, FCDC's in all four groups show significant increases over this period.

For 1996, foreign-controlled domestic corporations were involved in every type of principal industrial activity, but, based on number of returns, 85.6 percent were concentrated in four industrial groupings: (1) finance, insurance, and real estate (18,884 returns); (2) wholesale trade (17,071 returns); (3) services (10,867 returns); and (4) manufacturing (6,349 returns). (In general, data are presented only for broad industrial classifications; with some exceptions, they do not focus on more specific industrial

subgroups underlying these broad classifications. The Data Sources and Limitations section discusses how returns were classified by industry.)

While the services industrial division comprised a substantial number of the total returns filed by FCDC's, these companies tended to have small amounts of receipts and assets when compared to companies in the other three groupings. For this reason, most of the remaining discussion on industry characteristics focuses on companies classified in finance, insurance, and real estate; wholesale trade; and manufacturing. However, selected financial data for the services industrial division, by country, are included in Table 1.

Based on assets, two industrial divisions dominated the total for 1996. Finance, insurance, and real estate, and manufacturing accounted for \$1.5 trillion and \$0.9 trillion of total assets, respectively, for a combined 79.1 percent of the \$3.0 trillion of assets for all FCDC's. These two divisions made up a similar portion of the total assets reported on returns of other corporations. In this respect, FCDC's closely mirrored other corporations.

Alternatively, on the basis of total receipts, manufacturing and wholesale trade continued to be the two primary industrial categories of FCDC's for 1996. Manufacturers reported \$0.7 trillion of receipts, while wholesalers reported \$0.5 trillion. These two groups accounted for 72.8 percent of the \$1.7 trillion of total receipts recorded for all FCDC's. This percentage was substantially higher than the comparable one (42.0 percent) for other corporations that filed U.S. corporation income tax returns.

Companies classified in different industries often have different financial characteristics. For instance, the comparative levels of total assets and total receipts of companies primarily engaged in wholesale trade activities differ significantly from those primarily engaged in finance, insurance, and real estate activities. FCDC wholesalers produced large amounts of receipts with relatively small amounts of assets (as of the end of their accounting periods), resulting in \$1.67 of receipts for each dollar of assets for 1996. Companies classified in finance, insurance, and real estate reported large amounts of assets, but relatively small amounts of receipts. These FCDC's produced only \$.13 of receipts for each dollar of assets. Other corporations in these two industrial categories had similar characteristics.

While foreign-controlled domestic corporations accounted for about one-tenth of the \$15.5 trillion of total receipts reported by all corporations filing U.S. income tax returns for 1996, these companies played disproportionately larger roles in certain industrial groupings. For instance, FCDC's produced very substantial parts of the total receipts reported for mining (29.8 percent) and wholesale trade (22.4 percent). FCDC's also accounted for 14.9 percent of the receipts reported by all manufacturing companies. Conversely, FCDC involvement in the finance, insurance, and real estate; services; retail trade; transportation and public utilities; construction; and agriculture, forestry, and fishing industrial groupings was relatively low, accounting for only 8.0, 5.3, 3.6, 2.6, 2.1, and 1.9 percent, respectively, of the receipts for all companies classified in these categories.

While FCDC's accounted for 29.8 percent of the receipts for all mining companies for 1996, companies in this industrial division are not a major source of FCDC activity. Thus, they are not a major focus of this article. In comparison to the four industrial groupings shown in Table 1, mining accounted for only 2.0 percent of the total FCDC returns filed with IRS, 2.5 percent of the total FCDC receipts, and 3.3 percent of the total FCDC assets.

Statistics classified by industry do have certain limitations, which are discussed more thoroughly in the Data Sources and Limitations section, below. However, a brief point should be made here. FCDC's accounted for 14.9 percent and 22.4 percent of the receipts of all companies classified as manufacturers and wholesalers, respectively. However, these percentages may overstate the FCDC portion of wholesaling, and understate the FCDC portion of manufacturing. This is because certain U.S. companies (not foreign controlled) and their subsidiaries may have been involved in both manufacturing and wholesaling of products and reported tax information for these activities on a single (consolidated) income tax return, which was statistically classified under the one industry of its principal business activity, that being manufacturing, rather than trade. Conversely, many domestic companies controlled by foreign corporations acted as wholesalers in the United States for products manufactured overseas by their parent, or other related, companies. These domestic companies would have been classified in the wholesale trade industrial grouping.

Country Characteristics

Domestic corporations can be controlled by "persons" resident in any country throughout the world. However, for 1996, owners from eight countries controlled 54.0 percent of the 62,141 domestic corporations classified as 50-percent-or-more controlled by a foreign person. (Table 1 includes data for these eight countries.) The countries represent the geographic location of the direct foreign owner's place of residence in the case of individuals; and place of incorporation, organization, creation, or administration in the case of other persons. Because holding companies located in a country different from that of the ultimate owner may directly own the stock of U.S. affiliates, the country reported on the tax return may not necessarily reflect the country of the ultimate owner. No data on the extent of this potential limitation are available.

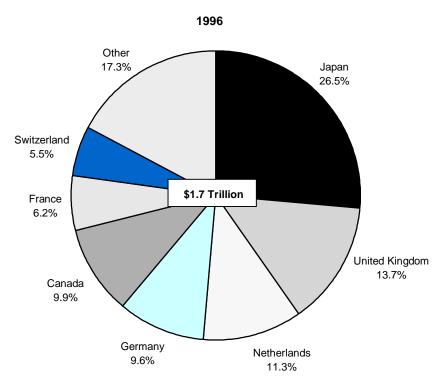

The 33,557 corporations controlled by persons from the eight countries shown in Table 1 accounted for the major portion of the most significant financial items for all FCDC's. These corporations reported 89.8 percent of FCDC total assets, 84.4 percent of total receipts, 85.6 percent of total taxable income, and 84.5 percent of total income tax after credits.

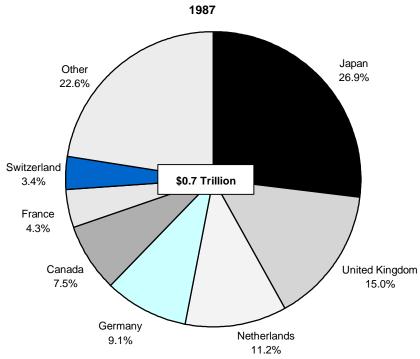

Domestic corporations controlled by Japanese persons reported assets of \$647 billion and total receipts of \$439 billion for 1996, amounts substantially larger than those for any other country. These assets and receipts represented 21.2 percent and 26.5 percent of the respective totals for all FCDC's. Companies controlled by Japanese persons also accounted for the largest amount of assets and receipts for each of the years in the 1987-1995 period (see Figure C). Companies classified in finance, insurance, and real estate accounted for \$365 billion, 56.5 percent, of the Japanese-controlled assets. Nearly \$252 billion, 57.3 percent, of the Japanese receipts were produced by wholesalers.

Although for 1996 Japanese-controlled domestic corporations accounted for the largest part of the assets and receipts reported for all FCDC's, they did not file the largest number of returns, and they did not report the largest amounts of U.S. taxable income and U.S. total income tax after credits. Canadian-controlled domestic corporations filed the most returns, 9,277; Japanese-controlled domestic corporations were second with 6,807; and United Kingdom-controlled domestic corporations were third

FigureC

Foreign-Controlled Domestic Corporations: Total Receipts for Selected Countries of Foreign Owners, Tax Years 1987 and 1996

with 5,942. The U.K.-controlled companies reported the largest amounts of U.S. taxable income and U.S. total income taxes after credits (\$11.5 billion and \$3.4 billion, respectively), with Japanese-controlled companies second (\$9.5 billion and \$3.0 billion), and Netherlands-controlled companies third (\$6.3 billion and \$2.0 billion).

Domestic corporations controlled by persons in the United Kingdom accounted for the second largest amount (\$227 billion) of FCDC receipts for 1996, as well as the second largest amount for the 1987-1995 period as a whole. These receipts represented 13.7 percent of the 1996 receipts for all FCDC's. Most of the U.K. receipts, totaling \$130 billion, were reported by manufacturers.

For 1996, Japanese-controlled domestic corporations reported a combined net income (less deficit) of \$4.5 billion on \$439.1 billion of receipts, while U.K.-controlled companies reported net income (less deficit) totaling \$11.3 billion on \$226.8 billion of receipts. There are many factors that may have caused the difference in the percentages of net income (less deficit) divided by receipts (1.0 percent versus 5.0 percent, respectively; see column 54 of Table 1) for these two countries. It is noteworthy to look at the reported profits (i.e., net income amounts exceeded deficit amounts) and losses (i.e., deficit amounts exceeded net income amounts) on a country/industry basis.

In the manufacturing industrial division, the percentages were both positive, although the U.K. ratio of 5.2 percent was considerably higher than the Japanese ratio of 2.6 percent. Japanese-controlled manufacturing corporations reported profits of \$3.4 billion on \$127.7 billion of receipts, while U.K.-controlled companies reported profits of \$6.7 billion on \$129.6 billion of receipts. While the receipts of these two groups of companies were similar, the profits resulting from those receipts were not equal.

There was an even larger difference between the two countries in the case of companies classified within the finance, insurance, and real estate group. Japanese-controlled corporations reported profits of \$0.6 billion, or 2.0 percent of their \$31.6 billion of receipts, while U.K.-controlled companies reported profits of \$2.6 billion, 7.4 percent of their \$34.5 billion of receipts.

For the wholesale trade area, Japanese- and U.K.-controlled companies reported somewhat simi-

lar amounts of profits (\$0.7 billion and \$1.1 billion, respectively). However, these profits were produced from very different levels of receipts, \$251.6 billion for Japan, but less than one-tenth of that amount, \$24.4 billion, for the United Kingdom. Thus, net income (less deficit) as a percentage of total receipts was just 0.3 percent for companies with Japanese owners as compared to 4.6 percent for those companies with owners from the United Kingdom.

Receipts, Deductions, and Profits

A domestic corporation, whether controlled by a foreign person or not, could have business activities in foreign countries, as well as in the United States. The estimates shown in this article include business activities in the United States, as well as certain foreign activities as reported on tax returns of domestic corporations. Whether from domestic or foreign sources, income includes receipts from sales and operations, as well as investment income. However, foreign-source income is reported differently, depending on whether it is earned through a branch or through a foreign subsidiary of a domestic corporation. "Total receipts" shown in this article include the receipts of foreign branch operations of U.S. companies. Also included in these receipts are dividends remitted to U.S. corporations by their foreign subsidiaries. However, for the statistics, two items of constructive taxable income from related foreign corporations (i.e., includable income from Controlled Foreign Corporations and foreign dividend "gross-up") are not included in "total receipts," nor are they included in the statistics for "total receipts less total deductions." These two items are, however, reflected in the data for "net income (less deficit)" [9]. (See the Explanation of Selected Terms section.)

The receipts and deductions shown in this article for foreign-controlled domestic corporations do not include amounts generated by their foreign parent companies. However, FCDC's could have had business transactions with their foreign parent companies (as well as with other related foreign persons), and FCDC receipts and deductions stemming from these transactions are included in the statistics [10].

An FCDC that transacts business with a related foreign (or domestic) person must determine "transfer prices" for those transactions. These transactions may affect either the income or the deductions of the FCDC, such as the sale and purchase of tangible goods, fees for services, interest payments on debts, leasing expenses, and royalties. How transfer prices are determined may affect the For 1996, FCDC profits increased by 9.0 percent, while profits of other corporations rose by 12.9 percent.

amount of net income or deficit reported on the U.S. income tax return of an FCDC. Section 482 of the Internal Revenue Code, and the related regulations, provide guidance in determining transfer prices. In general, the objective is to use "arm's length prices."

Approximately 90 percent of the \$1.7 trillion of total receipts reported by domestic corporations controlled by a foreign person consisted of "business receipts" (i.e., receipts from sales and operations). These same companies reported \$1.6 trillion of total deductions. Cost of goods sold was 66 percent of that total.

It is noteworthy to look at the "gross profit" of FCDC's. Gross profit is the difference between business receipts and cost of goods sold. The manufacturing and wholesale trade industrial groupings accounted for most of the reported amounts of business receipts and cost of goods sold, but manufacturers show substantially higher gross profits than do wholesalers. As shown in column 47 of Table 1, for every dollar of business receipts, manufacturers reported \$.71 of cost of goods sold. By comparison, wholesalers reported \$.83 of cost of goods sold for each dollar of business receipts.

Total receipts less total deductions for FCDC's equaled \$39.9 billion for 1996. This is somewhat different from the \$41.9 billion of net income (less deficit) reported by these companies. Total receipts less total deductions include all of the income "actually" (as opposed to "constructively") received by corporations and reported on tax returns. Unlike net income (less deficit), total receipts less total deductions include nontaxable interest on State and local Government obligations and exclude the two items of constructive taxable income from related foreign corporations previously mentioned. For 1996, FCDC's received \$0.7 billion of tax-exempt interest on State and local Government obligations and reported \$2.7 billion of constructive taxable income.

The previous paragraph discussed the difference,

for statistical purposes, between "total receipts less total deductions" and net income (less deficit). It is also important to make a distinction between (positive) net income and taxable income (i.e., "income subject to tax" shown in the statistics). Because certain statutory special deductions, including the "net operating loss" deduction, were available to most companies in computing their taxable income, the statistics for net income are generally larger than the amounts shown for taxable income. For 1996, FCDC's reported \$67.8 billion of net income and \$52.8 billion of taxable income, the difference in these amounts approximating the \$15.2 billion of statutory special deductions.

Net income (less deficit) for foreign-controlled domestic corporations was \$41.9 billion for 1996, up from the \$38.5 billion for 1995. Net income (less deficit) reported on all corporation income tax returns also increased between 1995 and 1996, from \$714.2 billion to \$806.5 billion. Thus, while the profits of FCDC's rose 9.0 percent, the profits of all corporations increased by 12.9 percent.

The performance of FCDC's in three of the four principal industrial groups shown in Table 1 improved for 1996. The finance, insurance, and real estate group reported a significant increase in net income (less deficit), \$11.4 billion for 1996 compared to \$4.0 billion for the previous year. The performance of wholesalers also increased substantially, net income (less deficit) rising to \$4.4 billion from \$2.9 billion for the previous year. Likewise, the services group improved its performance by eliminating the overall net loss (deficits in excess of net income) of \$0.2 billion for 1995 and replacing it with an overall net income amount of \$1.0 billion for 1996. However, companies whose principal business activity was in manufacturing reported \$22.5 billion of net income (less deficit), a significant drop from the \$29.3 billion reported for 1995. This decrease was due in part to the decrease in dividends received by these companies.

The \$41.9 billion of net income (less deficit) was the result of 29,115 corporations reporting \$67.8 billion of (positive) net income and 33,026 companies reporting \$25.9 billion of deficits [11]. Thus, nearly one out of every two (46.9 percent) domestic corporations with foreign owners reported a (positive) net income for 1996. In comparison, 56.0

percent of all other corporations filing U.S. income tax returns for the same year reported a (positive) net income. The percentage of FCDC's reporting net income for 1996 was higher than the range of percentages for the previous 10 years, which was generally between 39 percent and 44 percent.

The percentage of companies reporting (positive) net income varied among the different industrial groups. Over half of the FCDC's classified in manufacturing (58.7 percent) and services (52.1 percent) reported net income for 1996, while nearly one-half did in wholesale trade (48.1 percent). However, only 41.2 percent of the finance, insurance, and real estate companies reported net income. This industrial group is composed of a diverse group of corporations, and the percentage of corporations reporting positive amounts of net income demonstrates this diversity. Within this group, 88.9 percent of the regulated investment companies and real estate investment trusts reported amounts of net income. Banks and other credit agencies also had a high percentage (73.5 percent), followed by security and commodity brokers and services (57.7 percent) and insurance companies and agents (46.9 percent). However, only 37.7 percent of the 13,990 real estate companies reported net income for 1996.

Conversely, more than one of every two FCDC's reported a deficit for 1996. Collectively, these companies show \$25.9 billion in deficits, nearly the same amount as that reported for the previous year. Deficits could be carried back or forward to other tax years, under prescribed rules, to reduce the taxable income of those years (see "net operating loss deduction" in the Explanation of Selected Terms section). When a company "carried back" a deficit to a previous tax year, it could file either Form 1120X, Amended U.S. Corporation Income Tax Return, or Form 1139, Corporation Application for Tentative Refund. Data from these forms are not included in the statistics. Net operating losses "carried forward" to Tax Year 1996 from prior years are included in the statistics and further discussed in the next section.

Taxes

For 1996, foreign-controlled domestic corporations reported \$52.8 billion of "income subject to tax" (or taxable income, i.e., for purposes of the statistics, the base on which the "regular" income tax was computed), resulting in \$18.3 billion of "regular" income

tax. The \$19.0 billion of total income tax before credits reported by FCDC's consisted of the regular income tax plus the alternative minimum tax, the environmental tax, the Personal Holding Company tax, and the tax from the recapture of investment credits. The alternative minimum tax was \$0.7 billion for 1996. The remaining taxes comprised a very small part of the total, each accounting for less than \$5 million.

The difference between the \$67.8 billion of (positive) net income and \$52.8 billion of income subject to tax was, for the most part, the result of statutory special deductions. These deductions were allowed for most corporations in computing their taxable income and include the deduction for "net operating losses" (NOL's) from prior years. For 1996, the net operating loss deduction was \$13.2 billion and accounted for over 87 percent of the \$15.2 billion of total statutory special deductions. (See the Explanation of Selected Terms section for a discussion of the net operating loss deduction.) FCDC's reduced their 1996 net income by nearly 20 percent using NOL's carried over from prior years. (NOL's carried back to Tax Year 1996 from 1997 and beyond are not included in the statistics shown in this article.)

Tax credits totaling \$3.5 billion reduced the U.S. income tax liability of foreign-controlled domestic corporations to \$15.4 billion for 1996. The largest credits claimed were \$2.3 billion of foreign tax credits, \$0.6 billion of prior-year minimum tax credits, \$0.4 billion of general business credits, and \$0.2 billion of U.S. possessions tax credits. Other credits included the orphan drug credit and the nonconventional source fuel credit. The \$15.4 billion of total U.S. income tax after credits represent the tax liability as originally reported by taxpayers. However, it does not include any changes made by taxpayers through amended returns or by IRS as a result of examination or enforcement activities.

The percentage of FCDC's reporting tax liabilities (i.e., total income tax after credits) for 1996 was 33.6 percent, up slightly from the 33.2 percent reported for the previous year. The percentages of FCDC's that had U.S. income tax liabilities varied considerably among countries, as well as among different industrial groups. For 1996, of the eight countries shown in Table 1, the United Kingdom had the lowest percentage of companies with U.S. in-

come tax liabilities (25.1 percent), while Australia had the highest percentage (62.4). Among the four industrial groupings shown in the same table, the finance, insurance, and real estate group had the lowest percentage (23.5), while manufacturing had the highest percentage (52.3).

The "Targest" Foreign-Controlled Domestic Corporations

The "largest" companies accounted for the majority of the key FCDC financial items. For purposes of this article, the largest companies were those with at least \$250 million of total assets, or \$50 million of business receipts, or both. (Within the finance, insurance, and real estate industrial division, total receipts were used in place of business receipts for selecting the largest companies. Total receipts include both business receipts (i.e., gross receipts from sales and operations) plus investment income.) Both size of assets and size of receipts were used to select the largest companies in order to obtain maximum coverage of three primary industrial groupings: manufacturing; wholesale trade; and finance, insurance, and real estate [12]. These three groups accounted for most of the large companies. However, some of the largest companies were classified in other industries. The services group was not separately covered for this large-company analysis because only 7.4 percent of the largest FCDC's were classified in this group.

As previously discussed, certain industries have different characteristics from other industries. For instance, companies classified in wholesale trade generally report large amounts of receipts compared to their end-of-year assets. By comparison, corporations classified in finance, insurance, and real estate generally report large amounts of assets compared to their receipts. If either assets or receipts were used exclusively to select the largest companies, then the largest companies in one of these industrial divisions would have been undercovered in comparison to the other division. Table 2 shows data for the largest FCDC's by selected industrial groups. This table also contains data for the largest domestic corporations that were not foreign owned (i.e., that were owned by domestic persons, or in which ownership by each separate foreign person was less than 50 percent). For reasons previously discussed, data for domestic

corporations that filed Forms 1120S are excluded from the table.

Data shown in Table 2 are the focus of this section of the article, which covers the largest FCDC's in comparison to other large domestic corporations. In addition to presenting data by selected industrial groups, Table 2 also presents data by selected countries of the foreign owners of the domestic corporations, and by age of both the FCDC's and the other domestic corporations. Regarding the age of corporations, two categories are used: "new" and "old." Each company included in the study was placed into one of these categories based on the year of incorporation reported on the income tax return. Certain limitations of the data presented by age of the corporations are discussed below.

For 1996, the largest companies reported 93.3 percent of the total assets, 91.2 percent of the total receipts, 88.9 percent of the taxable income, and 87.8 percent of the total income tax after credits, of all the FCDC's. While accounting for most of these key financial items, these 2,842 companies comprised just 4.6 percent of the number of income tax returns filed by FCDC's.

For 1996, the largest FOC's reported profits of \$43.0 billion, while smaller FOC's reported losses of \$1.1 billion.

Table 2 shows that there were 15,921 large domestic corporations that did not have controlling foreign owners for 1996. These large companies accounted for only 0.7 percent of the total number of

income tax returns filed by domestic corporations without foreign owners (excluding Forms 1120S), an even smaller percentage than that of the FCDC's. However, like the largest FCDC's, these large companies comprised the majority of the key financial items of this group of returns: 90.6 percent of total assets, 76.8 percent of total receipts, 88.7 percent of taxable income, and 87.8 percent of total income tax after credits.

The largest companies generally report greater profits than do the smaller companies. For 1996, the largest FCDC's reported a combined profit of \$43.0 billion, while the smaller FCDC's reported a combined loss of \$1.1 billion. Later in this article, the profitability of the largest FCDC's is compared to

that of the largest domestically-controlled corporations. This comparison includes industry and age characteristics of the corporations. It also includes country characteristics for the FCDC's.

Industry Characteristics

The industrial classification of the largest companies is somewhat different as between domestic corporations that are foreign-controlled and those that are not. For 1996, 33.6 percent of the largest domestic companies without foreign owners were classified in the finance, insurance, and real estate division. For the largest FCDC's, though, this division accounted for only 13.5 percent. Conversely, the largest FCDC's were more commonly classified in manufacturing (39.6 percent versus 23.8 percent) and wholesale trade (28.3 percent versus 12.4 percent), compared to the largest domestic companies that were not foreign-controlled.

Table 2 presents selected items and percentages for the largest domestic corporations, both foreign-and domestically-controlled. In comparing the percentages between the two groups of returns, this article focuses on each of the three industrial groupings shown in the table, rather than on the data for all industries. By doing so, the effect of different financial characteristics in different industries becomes more evident.

In each of the three industrial groupings shown in Table 2, the percentage of returns reporting (positive) net income was less for the largest FCDC's than for the domestically-controlled large companies. The smallest differences were for manufacturers (73.3 percent versus 79.4 percent) and wholesalers (75.3 percent versus 83.1 percent). (See column 40 of the table.) The largest difference was in finance, insurance, and real estate, with 86.3 percent of the domestically-controlled companies reporting net income, compared to 67.5 percent of the FCDC's. This group contained a wide variation of business activities and corresponding profits and losses. For instance, 92.1 percent of domestically-controlled banks and credit agencies reported (positive) net income, compared to 79.1 percent of their FCDC counterparts. In contrast, 65.6 percent of domestically-controlled real estate companies reported (positive) net income, compared to 43.1 percent of their FCDC counterparts.

Another key ratio is net income (less deficit) to

total receipts (column 54 of Table 2). Once again, for each of the three industrial groupings shown in this table, domestically-controlled companies had significantly higher percentages than did their foreign-controlled counterparts. The differences were: (1) for finance, insurance, and real estate, 14.1 percent for domestically-controlled companies, compared to 7.0 percent for FCDC's; (2) for manufacturing, 7.1 percent versus 3.2 percent; and (3) for wholesale trade, 1.9 percent versus 1.0 percent.

Because the finance, insurance, and real estate industrial sector includes a diverse group of business activities and corporations, this article will now take a closer look at the difference in the ratios of net income (less deficit) to total receipts for domestically-controlled companies (14.1 percent) versus FCDC's (7.0 percent). The finance, insurance, and real estate sector includes two types of corporations which are taxed under special provisions of the Internal Revenue Code: regulated investment companies (RIC's) and real estate investment trusts (REIT's). RIC's are typically mutual funds, while REIT's invest in real estate and mortgages. In general, companies electing to qualify under either of these provisions must meet certain requirements, including those related to distributions of income to shareholders. Such income is then taxed at the shareholder level. Thus, the tax liability of RIC's and REIT's is typically low, as shown in column 6 of Figure D. RIC's and REIT's played a much larger role for domestically-controlled corporations than for FCDC's. Looking at ratios of net income (less deficit) to total receipts for each of the other four industries shown in Figure D, FCDC's had lower levels of profitability than did the other domestic corporations. In particular, FCDC's classified in real estate reported a negative 5.3 percent as compared to a positive 7.1 percent for other domestic corporations.

A third method of comparing the profitability of the largest FCDC's to other large domestic corporations focuses on retained earnings. Column 12 of Table 2 shows the total of unappropriated and appropriated retained earnings of the corporations. The amounts were reported in the end-of-year balance sheets of the corporations' books of account. They represent earnings and profits of the corporations retained from normal and discontinued operations of previous years, as well as from "extraordinary" gains

FigureD

"Large" Domestic Corporations in the Finance, Insurance, and Real Estate Industrial Group: Selected Items, by Selected Industries and Control Status, Tax Year 1996

[Money amounts are in millions of dollars]

	Number			Net income	Income	Total	Net income (less
Industry and control status	of	Total	Total	(less	subject	income tax	deficit) divided
	returns	assets	receipts	deficit)	to tax	after credits	by total receipts
							(percentage)
	(1)	(2)	(3)	(4)	(5)	(6)	(7)
Finance, insurance, and real estate: 1							
Domestic corporations not foreign controlled 2	5,345	14,278,738	1,855,354	261,811	133,797	40,260	14.1
Foreign-controlled domestic corporations	385	1,389,723	179,368	12,464	12,568	3,514	6.9
Banking and credit agencies:							
Domestic corporations not foreign controlled ²	1,579	6,613,871	615,411	69,400	68,954	20,693	11.3
Foreign-controlled domestic corporations	115	356,300	31,228	2,811	2,469	763	9.0
Security, commodity brokers and services:							
Domestic corporations not foreign controlled 2	133	867,921	98,402	11,007	10,827	3,179	11.2
Foreign-controlled domestic corporations	58	491,256	35,433	3,023	3,142	528	8.5
Insurance, including agents, brokers, and services:							
Domestic corporations not foreign controlled 2	820	3,067,786	937,721	51,384	48,266	14,756	5.5
Foreign-controlled domestic corporations	87	437,027	96,534	4,588	4,199	1,393	4.8
Real estate:							
Domestic corporations not foreign controlled 2	131	30,189	17,253	1,219	1,236	405	7.1
Foreign-controlled domestic corporations	58	35,721	7,471	-394	313	82	-5.3
Regulated investment companies and real estate							
investment trusts:							
Domestic corporations not foreign controlled 2	2,561	3,603,567	173,620	124,340		65	71.6
Foreign-controlled domestic corporations	8	6,884	647	171		1	26.4

¹ Includes other industries not separately shown in this figure.

NOTE: "Large" corporations were those with total assets of \$250,000,000 or more, and/or with total receipts of \$50,000,000 or more (for the finance, insurance, and real estate industrial group).

and losses, and from prior period adjustments. The amounts are also after reductions for dividends and distributions made to stockholders. For 1996, the largest FCDC's reported \$9.3 billion of *negative* retained earnings, while other large domestic corporations reported \$2,304.0 billion of *positive* retained earnings. It should be noted that retained earnings are components of net worth and thus affect the ratio of net income (less deficit) to net worth, which is shown in column 53 of Table 2.

The differences in the ratios between domestically-controlled large companies and their foreigncontrolled counterparts for taxable income (i.e., "income subject to tax") compared to total receipts were also generally substantial. However, in the finance, insurance, and real estate group, the differences narrowed. The difference in net income (less deficit) as a percentage of total receipts for this group was 14.1 percent for domestically-controlled companies compared to 7.0 percent for FCDC's. In calculating the taxable income as a percentage of the total receipts reported by these companies, the difference narrowed to 7.2 percent for domestically-controlled companies versus 7.0 percent for FCDC's. This "narrowing" effect reflects, to some extent, the relatively large amount of statutory special deductions claimed by domestically-controlled large companies classified in finance, insurance, and real

² Excludes Forms 1120S, U.S. Income Tax Return for an S Corporation.

estate. In fact, for domestically-controlled companies, this industrial group claimed statutory special deductions equaling \$136.7 billion (of the \$167.5 billion total for all industries). For FCDC's, the same industrial group claimed only \$2.9 billion of the \$12.2 billion of statutory special deductions.

Table 2 also includes the ratio of total income tax after credits to total receipts (column 61). The total income tax after credits reported by both domestically-controlled companies (\$134.5 billion) and by FCDC's (\$13.5 billion) represents the tax liability of these companies as reported on their originally-filed U.S. income tax returns. However, it does not take into account either of the following changes: (1) amended returns filed by the corporations, or (2) adjustments made by IRS as a result of examination or enforcement activities. Among other reasons, corporations could file amended returns to use carryback provisions for net operating losses and unused foreign tax and general business credits.

In using total income tax after credits as a percentage of total receipts, it should also be noted that a small portion of total income tax after credits (for example, the tax recapture of prior-year investment credits) does not relate to the current-year total receipts reported by corporations. However, this is not considered to be a major limitation in using the percentage because the regular income tax and the alternative minimum tax represented 99 percent or more of the total income tax for both domestically-controlled companies and FCDC's [13].

In each of the three industrial groupings shown in Table 2, the percentage of total income tax after credits divided by total receipts is higher for domestically-controlled corporations than it is for FCDC's. The finance, insurance, and real estate group shows the highest percentages for both domestically-controlled corporations (2.2 percent) and for FCDC's (2.0 percent). The differences in these percentages are more significant between the largest domestically-controlled corporations and the largest FCDC's in the other two industrial groups. The differences are: (1) for manufacturing, 1.4 percent versus 1.0 percent; and (2) for wholesale trade, 0.7 percent versus 0.4 percent. These percentages appear to be more similar (comparing large FCDC's to large domestically-controlled corporations) than those using net income (less deficit) that were previously

discussed in this section. However, the differences remain significant. For example, the largest domestically-controlled wholesale corporations reported 51.1 percent more taxes after credits than did the largest FCDC's classified in that industrial sector, when based on the same level of receipts.

Tax credits is one factor that caused the percentages of total income tax after credits divided by total receipts for FCDC's and for domestically-controlled corporations to become more similar to each other. Domestically-controlled corporations claimed relatively more tax credits than did FCDC's. For 1996, large FCDC's claimed \$3.4 billion of credits, equalling 20.2 percent of their income tax liabilities before credits. Other large domestic corporations claimed \$48.3 billion of credits during the same time period, equalling 26.4 percent of their income tax liabilities before credits. Domestically-controlled manufacturing companies that claimed \$28.3 billion of foreign tax credits accounted for most of the total credits.

The differences in financial characteristics of different industries once again become evident when reviewing the percentages shown in Table 2. For instance, when the percentage of net income (less deficit) divided by total receipts (column 54) is used, the finance, insurance, and real estate group has a substantially higher percentage (7.0 percent for the largest FCDC's) than does the wholesale trade group (1.0 percent). However, when total assets are used as the denominator in place of total receipts (column 52), the difference is reversed (the largest FCDC's in finance, insurance, and real estate have a 0.9 percentage and those in wholesale trade have a 1.7 percentage). Because the distribution of industrial activities based on principal businesses is not the same for the largest FCDC's as it is for domestically-controlled companies, this, again, illustrates the importance of comparing domestically-controlled companies to FCDC's on an industrial basis.

Age Characteristics

Table 2 presents data for both the largest FCDC's and other large domestic corporations by the age of the corporations. "New" corporations are those with years of incorporation of 1994 and after reported on their income tax returns [14]. "Old" corporations are those incorporated in 1993 and before, or with unknown (i.e., unreported) dates of incorporation.

The year of incorporation may be somewhat unreliable as an indicator of the true age of corporations. For example, a consolidated return may include companies that fall into both the new and old categories. However, the return (including all of the financial information contained in it) was classified into just one of the categories based on the year of incorporation of the parent company. Another limitation is the case of a reorganization of an old corporation and, as a result, it becoming a new corporation and reporting a recent year of incorporation. Here, a new corporation is not necessarily the same as a new business. A third limitation is that the year of incorporation is difficult to verify during statistical processing because there are no other items to which it can be compared on a tax return form, and recourse to other sources is not always practical. Thus, it is subject to greater levels of taxpaver reporting and data entry errors. Despite these limitations, it is believed that an analysis of the data by age of the corporations is meaningful. Further, there is no known bias in the accuracy of the year of incorporation between FCDC's and other domestic corporations.

Looking at the age characteristics of both the largest FCDC's and other large domestic corporations provides some additional information on the attributes of FCDC's. First, for 1996, most of the largest corporations were old corporations. For the FCDC's, 2,591 of the 2,842 largest corporations were old corporations (91.2 percent). The other large domestic corporations were very similar to FCDC's in this respect, with 91.5 percent classified as old corporations (i.e., 14,570 out of 15,921).

In most cases, new FCDC's reported lower profits than did their older counterparts. Startup costs of new businesses may be one reason for the lower profits. Looking at net income (less deficit) as a percentage of total receipts, new FCDC's had a ratio of essentially zero for 1996, while old FCDC's had a ratio of 3.1. This type of significant difference occurred in both manufacturing (1.0 percent for new FCDC's versus 3.3 percent for old FCDC's) and wholesale trade (negative 0.7 percent versus positive 1.4 percent). However, it did not occur in finance, insurance, and real estate. For this industrial sector, new FCDC's had a higher percentage than the older FCDC's (8.2 percent versus 6.9 percent). The age

difference in profitability performance of other large domestic corporations was similar to FCDC's. For them, the profit ratio of new companies (5.5 percent) was also less than that for the older companies (7.6 percent). (See column 54 of Table 2.) In addition to comparing FCDC's to other domestic corporations on the bases of industry and size, this article uses the same age groupings for the comparisons.

There are six unique industry and age combinations of the largest corporations shown in Figure E by which FCDC's can be compared to other domestic corporations. In all six of these, the profit ratios of net income (less deficit) to total receipts were substantially lower for FCDC's than they were for other domestic corporations.

In manufacturing, new FCDC's had a profit ratio of 1.1 percent, compared to 4.4 percent for other new domestic corporations. Within this same industrial group, the ratio for old FCDC's was 3.3 percent and that for other old domestic corporations was 7.3 percent.

For wholesalers, the older corporations had profit ratios of 1.4 percent (FCDC's) and 2.0 percent (other domestic corporations). The new large FCDC's in this industrial group reported a combined negative amount of net income (less deficit) equaling -0.7 percent of their total receipts, while their domestically-controlled counterparts reported a positive percentage equaling 0.6.

In the finance, insurance, and real estate group, new corporations had ratios of net income (less deficit) to total receipts of 8.2 percent (FCDC's) and 18.7 percent (other domestic corporations). The older corporations had ratios of 6.9 percent (FCDC's) and 14.0 percent (other domestic corporations). Due to the diverse business activities of this group, as previously mentioned, further profitability analysis by age within the specific industries might identify additional variations not apparent from the industrial division (or group) totals. However, this is beyond the scope of this article. In the next section of this article, country detail of the large FCDC's is examined.

Country Characteristics

Within each industrial grouping in Table 2, there are seven countries shown for the FCDC's. The country information is based on the location of the owner's

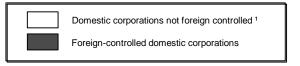

FigureE

Profitability of "Large" Domestic Corporations, by Control Status, Age of Corporations, and Selected Industrial Groupings, Tax Year 1996

Net income (less deficit) as a percentage of total receipts

Age and selected industrial grouping

¹ Excludes Forms 1120S, U.S. Income Tax Return for an S Corporation.

NOTES: "Large" corporations were those with total assets of \$250,000,000 or more, and/or with business receipts of \$50,000,000 or more (total receipts were used in lieu of business receipts for the finance, insurance, and real estate division). "New" corporations were those with dates of incorporation between 1994 and 1997; "old" corporations were those with dates of incorporation prior to 1994.

country of residence, incorporation, organization, creation, or administration, as reported on the U.S. income tax returns of the foreign-controlled domestic corporations. (See the Data Sources and Limitations section of this article for a brief discussion of the possible limitations of the data classified on a country basis.) The seven countries selected for the table were based on the largest aggregated amounts of total receipts for all industries. FCDC's controlled by persons from these seven countries accounted for 74.1 percent of the number of returns, 87.6 percent of the assets, and 84.4 percent of the total receipts of the 2,842 largest FCDC's.

More specifically, Japanese owners controlled 693 of the 2,842 largest FCDC's, which was the largest single portion (24.4 percent). These corporations accounted for 20.9 percent of the assets and 26.9 percent of the receipts of all large FCDC's. Three-fourths of these corporations were either

manufacturers or wholesalers.

United Kingdom owners controlled the second highest number of the largest FCDC's, 335, or 11.8 percent of the total. Following the United Kingdom, Canada shows 308; Germany, 229; the Netherlands, 222; France, 172; and, Switzerland, 147.

FCDC's with U.K. owners also had the second largest total assets and total receipts of all the largest FCDC's. These 335 corporations accounted for 18.2 percent of the assets and 14.1 percent of the receipts of all the largest FCDC's.

Within a given industrial and age grouping, domestic corporations controlled by owners in different foreign countries had different levels of profitability. Sometimes the differences were comparatively small, such as for old FCDC's classified as manufacturers. The ratios of net income (less deficit) to total receipts for the seven countries ranged from a low of 2.62 percent for Canada to a high of

5.26 percent for the United Kingdom. As Table 2 indicates, in other cases, the differences among countries were much larger.

Summary

Direct foreign investment and activity in the United States through FCDC's continued to grow for 1996. While total receipts reported on all U.S. corporation income tax returns increased by 6.8 percent over the previous year, receipts of domestic corporations controlled by foreign persons increased more rapidly at 7.8 percent. As a result, the share of total corporate receipts accounted for by FCDC's increased slightly to 10.7 percent.

Two industrial groupings (manufacturing and wholesale trade) generated nearly three-fourths of the total receipts of all FCDC's. From a country perspective, domestic corporations controlled by persons in Japan reported total receipts of \$439 billion, 26.5 percent of the FCDC total. In addition, the United Kingdom, the Netherlands, Canada, and Germany accounted for 13.7, 11.3, 9.9, and 9.6 percent, respectively, of the total.

The collective net income (less deficit) reported by foreign-controlled domestic corporations increased to \$41.9 billion, compared to \$38.5 billion for 1995. Total income tax after credits moved in the same direction as profits, increasing from \$13.2 billion for 1995 to \$15.4 billion for 1996.

Of the 62,141 foreign-controlled domestic corporations, the 2,842 "largest" companies accounted for about 90 percent of the total amounts of key financial items (e.g., total assets, total receipts, taxable income, and total income tax after credits). In comparing these large companies to large domesticallycontrolled companies on industry and age bases, generally, the ratios related to profitability, e.g., net income (less deficit) compared to total receipts, were substantially smaller for the FCDC's. While this article has been able to compare the profits of FCDC's to other domestic corporations on the same bases of size, industry, and age, additional research is needed to explain the remaining differences in the profitability of the two groups of companies with different owners [15].

Explanation of Selected Terms
The following are brief explanations of some of the terms used in this article. For more extensive

definitions, see *Statistics of Income—1996*, *Corporation Income Tax Returns*.

Alternative Minimum Tax.—This tax was designed to ensure that a taxpayer with substantial economic income would not avoid significant tax liability through a legitimate use of exclusions, deductions, and credits. It is included in the statistics shown for both total income tax before (and after) credits.

Attribution Rules.—In regard to domestic corporations that are 50 percent or more owned by one foreign "person," these rules provide that an individual shall be considered as owning the stock of a corporation if it is owned, directly or indirectly, by or for his or her family. The family of an individual includes his or her spouse, brothers and sisters, ancestors, and lineal descendants. For more information on these rules, see section 267(c) of the Internal Revenue Code. However, if a corporation is owned by two or more unrelated persons, neither of which owned 50 percent or more of the corporation, then that corporation was excluded from the FCDC statistics even though, together, these persons may have met the 50-percent-or-more ownership criterion. See also, Foreign Person, defined below.

Business Receipts.—These receipts were, in general, the gross operating receipts of the corporation reduced by the cost of returned goods and allowances. Some corporations reported sales and excise taxes as part of their gross receipts from sales (and deducted these taxes as part of "cost of goods sold" or as "taxes paid"); others reported their receipts after adjustment for these taxes. Business receipts include rents reported as the principal business income by real estate operators and certain manufacturing, public utility, trade, and service corporations. In the finance, insurance, and real estate industries, business receipts include such banking items as fees, commissions, trust department earnings, and service charges. Interest, the principal operating income of banking and savings institutions, was excluded from business receipts, but included in the separate statistics for "interest received." Also in the finance, insurance, and real estate division, premium income of most insurance companies was included in business receipts.

Cost of Goods Sold.—This item generally consisted of the direct costs incurred by corporations in producing goods or providing services. Included

were costs of materials used in manufacturing; costs of goods purchased for resale; direct labor; and certain overhead expenses, such as rent, utilities, supplies, maintenance, and repairs. For statistical processing purposes, however, certain items (such as advertising, amortization, bad debts, compensation of officers, depletion, depreciation, interest paid, sales and excise taxes, and contributions to charitable organizations, employee benefit programs, and pension plans) reported by taxpayers in cost of goods sold schedules were transferred to their respective and separate deduction categories.

Foreign Person.—A foreign person (or entity) is defined as a person other than a U.S. person. A U.S. person includes: (1) a citizen or resident of the United States, (2) a domestic partnership, (3) a domestic corporation, and (4) any estate or trust (other than a foreign estate or trust). Section 7701 of the Internal Revenue Code further defines the term, U.S. person.

Income Subject to Tax.—For most corporations, income subject to tax, i.e., taxable income, was defined by Internal Revenue Code section 63 and consisted of (positive) net income minus certain statutory special deductions. There were special provisions in the Code for determining the taxable income of life insurance companies, regulated investment companies, and real estate investment trusts. On Form 1120, this item was reported on page 1, line 30.

Net Income (or Deficit).—This is the difference between taxable receipts and the ordinary and necessary business deductions allowed by the Internal Revenue Code. In this article, for a group of returns, this item is referred to as either "profits" (i.e., net income exceeds deficits) or "losses" (deficits exceed net income). It reflects not only actual receipts, but "constructive" receipts as well (i.e., includable income from Controlled Foreign Corporations and the foreign dividend "gross-up"). Tax-exempt interest on State and local Government obligations is excluded from this item, but is included in "total receipts." Because certain statutory special deductions, including the net operating loss deduction, were allowed most corporations in computing their "taxable income" (or "income subject to tax"), the statistics for (positive) net income are generally larger than the amounts shown for (U.S.) "income subject to tax" (i.e., the base on which the regular income tax was computed). See also the discussion of the Net Operating Loss Deduction, shown below. On Form 1120, this item was reported on page 1, line 28.

Net Operating Loss Deduction (NOLD).—A statutory "net operating loss" (NOL) for a given tax year could be carried back, in general, 3 years to reduce the taxable income of those years, and any amount of the NOL not offset against income during that time could be carried forward and offset against income for a period not exceeding 15 years. The amount of the deduction included in the statistics, however, consists only of losses from prior years carried forward and actually used to reduce taxable income for the current (1996) tax year. Losses incurred after the 1996 Tax Year and carried back to that year at a later date could not be reported on the tax returns used for this article. Net operating losses on which the 1996 deduction was based include: (1) the excess of ordinary and necessary business expenses over income for previous loss years, and (2) statutory special deductions claimed for a loss year for dividends received and for dividends paid on certain preferred stock of public utilities (or any excess of such deductions over net income).

Net Worth.—This item represented the stockholders' equity in the corporation, i.e., total assets less the claims of creditors. It is the net result of adding capital stock, paid-in or capital surplus, appropriated retained earnings, and unappropriated retained earnings, and then subtracting the cost of treasury stock. Treasury stock is common or preferred stock originally issued by the corporation which has been reacquired and held at the end of the accounting period by the issuing corporation.

Number of Returns.—The data contained in this article are based on the number of returns filed for Tax Year 1996. For expedient reasons, the number of returns is sometimes referred to in this article as the number of corporations. However, the actual number of corporations may be larger than the number of returns because most domestic corporations could elect to file consolidated income tax returns. These returns were filed by common parent corporations and contained combined financial data of two or more affiliated domestic corporations meeting certain stock ownership requirements. Each consolidated return was treated for statistical purposes as a single unit. The number of returns shown in this article represents returns of "active" corporations,

i.e., those which reported any income or deduction items. While any corporation in existence during any portion of the taxable year was required to file an income tax return (even though it may have been inactive, not having any income or deductions), the great majority of returns filed with the Internal Revenue Service were for active corporations.

Statutory Special Deductions.—This item was the sum of: (1) deductions for net operating losses of prior years, (2) intercorporate dividends received deductions, (3) deductions for dividends paid on certain preferred stock of public utilities, (4) deductions for dividends paid by regulated investment companies and real estate investment trusts, and (5) Internal Revenue Code section 857(b)(2)(E) deductions reported by real estate investment trusts. Since these deductions were allowed by law in addition to ordinary and necessary business deductions, they are shown in the statistics as deductions from net income. In general, (positive) net income less statutory special deductions equals income subject to tax.

Total Assets.—This item represented those assets reported in the end-of-year balance sheets of the corporations' books of account. Total assets were net amounts after reduction by accumulated depreciation, accumulated amortization, accumulated depletion, and the allowance for bad debts.

Total Income Tax After Credits.—For 1996, total income tax was primarily comprised of the regular tax imposed on corporate income subject to tax (96.5 percent of the total tax) and the alternative minimum tax (3.5 percent). A small number of corporation income tax returns without net income reported amounts of regular tax. The regular tax, in these cases, resulted from special provisions of the Internal Revenue Code applicable to life insurance operations. Additionally, some taxes included in total income tax were not imposed directly on a corporation's income subject to tax, such as the recapture tax on investment credits. Thus, a small number of corporations without net income and regular tax reported such taxes on their income tax returns. These taxes were included in the statistics for total income tax. Also included in total income tax were the taxes on undistributed net capital gains of regulated investment companies. For 1996, the credits used to reduce the total income tax of FCDC's primarily included the foreign tax credit (63.4 percent of the total credits), the prior-year

minimum tax credit (18.2 percent), the general business credit (12.6 percent), and the U.S. possessions tax credit (4.6 percent). The statistics shown for this item may differ somewhat from the actual income tax collected and the final income tax liability of corporations for Tax Year 1996. Adjustments could be made to income tax returns after they were filed, which could affect the final tax liability. Such adjustments are not reflected in the statistics. Adjustments could result from tax examination and enforcement activities by IRS, or the use of carryback provisions for net operating losses and unused foreign tax and general business credits by taxpayers.

Total Receipts.—This item includes all of the income actually (as opposed to constructively) received by a corporation and reported on its income tax return. It includes gross taxable receipts, before the deduction of cost of goods sold and ordinary and necessary business expenses. It also includes taxexempt interest received on State and local Government obligations. A domestic corporation (i.e., one incorporated in the United States), whether controlled by a foreign person or not, could have business activities in a foreign country, as well as in the United States. Thus, total receipts may include those from foreign branch operations of the U.S. company. Also, the total receipts of a domestic corporation conducting business abroad through foreign subsidiaries may include dividends remitted from those subsidiaries. This term, however, excludes certain taxable income from related foreign corporations that is only constructively received by the domestic corporation. Also, the statistics for this term exclude long-term capital gains of regulated investment companies.

Total Receipts Less Total Deductions.—This item differs from the "net income (less deficit)" shown in the statistics in that it includes nontaxable interest received on State and local Government obligations, and excludes constructive taxable income from related foreign corporations.

Data Sources and Limitations

Sample

The statistics for domestic corporations controlled by a foreign person are based on samples of corporation income tax returns filed primarily on Form 1120 (*U.S. Corporation Income Tax Return*). In addition,

the 1996 statistics include data from the small numbers of other domestic corporation income tax returns filed on Forms 1120L (*U.S. Life Insurance Company Income Tax Return*), 1120-RIC (*U.S. Income Tax Return for Regulated Investment Companies*), 1120-REIT (*U.S. Income Tax Return for Real Estate Investment Trusts*), and 1120-PC (*U.S. Property and Casualty Insurance Company Income Tax Return*). As previously mentioned, FCDC's could not file Forms 1120S.

Form 1120 sampled returns were stratified based on the size of total assets and the size of "proceeds" (which was used as a measure of income and was the larger of the absolute value of net income or deficit or the absolute value of "cash flow," i.e., net income plus depreciation and depletion). Forms 1120L, 1120-RIC, 1120-REIT, and 1120-PC were sampled based solely on the size of total assets.

For 1996, the sampling rates for Forms 1120 alone (the overwhelming majority of the returns included in the sample) ranged from less than 1 percent to 100 percent. In general, Form 1120 returns with assets of \$50 million or more, or with "proceeds" of \$10 million or more, were selected for the Statistics of Income study at the 100-percent rate. For additional information on the sampling rates, see *Statistics of Income—1996, Corporation Income Tax Returns*.

Because the data presented are estimates based on samples, they are subject to sampling error. To

properly use these data, the magnitude of the sampling error should be known. Coefficients of variation (CV's) are used to measure that magnitude. Figure F shows CV's for selected financial data of selected industrial groups. For a general discussion of CV's, see the Appendix located near the back of this issue of the *Statistics of Income Bulletin*.

Nonsampling Limitations

Most of the data in this article relate to Tax Year 1996, defined to cover returns with accounting periods that ended during the 12-month span beginning in July 1996 and ending in June 1997. The sampling frame for the 1996 statistics consisted, in general, of tax returns with these accounting periods which posted to the IRS Business Master File between July 1996 and June 1998. As a result of the 12-month span for ending accounting periods, the statistics shown in this article include income received or expenses incurred during a 23-month span. For Tax Year 1996, that span was from August 1995 through June 1997. Nevertheless, most of the income and expense data are, in fact, associated with Calendar Year 1996.

Returns were selected for this study based on taxpayers' responses to two questions that appeared on the various types of Form 1120. The first question asked whether any "foreign person" owned, directly or indirectly, 25 percent or more of the filing corporation's voting stock at any time during the tax

FigureF

Foreign-Controlled Domestic Corporations: Coefficients of Variation for Selected Items, by Selected Industrial Groupings, Tax Year 1996

Selected items	All industries	Manufacturing	Wholesale trade	Finance, insurance, and real estate	Services
		Coeffic	cients of variation (perce	ntages)	
	(1)	(2)	(3)	(4)	(5)
Number of returns	4.37	10.12	8.51	6.93	12.42
Total assets	0.07	0.12	0.40	0.08	0.52
Total receipts	0.29	0.26	0.78	0.39	1.93
Net income	0.32	0.39	1.25	0.52	2.06
Deficit	0.90	1.24	2.53	1.74	3.31
Income subject to tax	0.34	0.41	1.44	0.45	2.65
Total income tax after credits	0.38	0.45	1.47	0.52	3.01

year. If this question was answered "yes," then a second question asked for the percentage owned [16]. If the first question was answered "yes," and the second question was answered with a percentage between 50 and 100, then the return was included in the FCDC statistics [17, 18]. Taxpayers sometimes incorrectly answered these questions, or did not answer them at all [19]. However, prior to tabulation, corporations with large amounts of assets or receipts, and with changes in foreign ownership status between 1995 and 1996, were researched, and the answers to the questions were verified. These large corporations had a dominating effect on the estimates for balance sheet, income statement, and tax items.

Each return used for the statistics had an industry code reported, or was assigned one during administrative or statistical processing. This code was used as a classifier of the returns. The industry code represented the principal business activity (i.e., the activity which accounted for the largest portion of the total receipts) of the corporation filing the return. However, a given return may have been for a company engaged in several business activities or may have been a consolidated return filed for an affiliated group of corporations that conducted different business activities. To the extent that some consolidated (and non-consolidated) corporations were engaged in many types of business activities, the data in this article are not entirely related to the industrial activity under which they are shown.

There is an additional limitation related to data presented by industrial classification. Companies that sell similar products may not be classified in the same industry. For instance, those FCDC's that were primarily U.S. distributors of products made in foreign countries by their parent or other related companies were classified as wholesalers. However, other domestic corporations that were also distributors and that were included in consolidated returns covering the manufacture and distribution of similar products may have been classified as manufacturers.

Each return used for the statistics also had a foreign country code assigned during statistical processing which identified the owner's country. For individuals, it was the owner's country of residence. For all others, it was the country in which the foreign entity was incorporated, organized, created, or administered. The code was also used as a classifier of

the returns. To the extent that a holding company or other affiliated entity was part of a chain between a U.S. subsidiary company and the ultimate parent, the data may not be entirely related to the foreign country under which they are shown.

Notes and References

- [1] For 1995 data covering FCDC's, see Hobbs, James R., "Foreign-Controlled Domestic Corporations, 1995," *Statistics of Income Bulletin*, Fall 1998, Volume 18, Number 2. In addition, FCDC data for Tax Years 1991-1995 are included on the IRS Internet site at: http://www.irs.ustreas.gov/prod/tax_stats.
- [2] Total corporate data come from: (1) Statistics of Income Bulletin, Spring 1999, Volume 18, Number 4; (2) Statistics of Income—Corporation Income Tax Returns, selected years; and (3) Source Book of Statistics of Income—Corporation Income Tax Returns, selected years.
- [3] Direct investment is different from portfolio investment in that the latter exerts no control over the management of the enterprise, except to the extent, for example, of rights to vote periodically in stockholder meetings of the corporation. The portfolio investor has a minimal interest in a company, and is primarily seeking dividend payments, an increase in the value of the shares of stock, or both.
- [4] Sections 7701(a)(4) and (5) of the Internal Revenue Code define a domestic corporation as one created or organized in the United States or under the laws of the United States or any State. A foreign corporation is "one which is not domestic."
- [5] There are separate tabulations covering branch operations of foreign corporations with income "effectively connected" with a U.S. trade or business in *Statistics of Income—1996, Corporation Income Tax Returns*.
- [6] As a result of the Statistics of Income (SOI) sampling process, data shown in this article for "all corporations" exclude certain out-of-scope returns, such as returns for homeowners' associations (Form 1120-H) and certain politi-

cal organizations (Form 1120-POL). For a more complete listing of the returns excluded from the SOI corporation sample, see the Description of the Sample and Limitations of the Data section of Statistics of Income—1996, Corporation Income Tax Returns. Regarding historical data contained in this article, "all corporation" returns included returns of Foreign Sales Corporations (Form 1120-FSC) and Interest-Charge Domestic International Sales Corporations (Form 1120-IC-DISC) through Tax Year 1987. Beginning with Tax Year 1988, these returns were excluded from the SOI corporate programs. Because these returns accounted for such a small portion of the total for most financial items, this change is not considered to be significant in terms of year-to-year comparisons.

- For additional information on foreign invest-[7] ment in the United States, see Survey of Current Business reports, produced by the U.S. Department of Commerce, Bureau of Economic Analysis (BEA). BEA periodically produces several data sets related to this subject, including: (a) "Foreign Direct Investment in the United States: New Investment in 1998," June 1999; (b) "The International Investment Position of the United States at Yearend 1998," July 1999; and (c) "Foreign Direct Investment in the United States: Preliminary Results From the 1997 Benchmark Survey," August 1999. In addition to the printed versions of these reports, electronic versions can be obtained from the Internet at: http://www.bea.doc.gov. The data in these reports may not be directly comparable to the information shown in this article because of definitional differences such as those relating to time periods covered and levels of foreign ownership.
- [8] The 10.3-percent increase between 1995 and 1996 in the assets of domestic corporations controlled by foreign persons, as well as the 10.1-percent increase for all corporations, may overstate the actual "growth in investment." Assets are generally reported at book value on tax returns (i.e., at the value at the time of

acquisition). The book value of newly- acquired assets is generally greater than the book value of similar assets they replaced. Therefore, new corporations may tend to have a greater percentage of new assets with greater book values. To the extent that new corporations comprised a different portion of FCDC's than they did for other companies, the comparability of 10.3 percent to 10.1 percent (above) may be limited.

[9] In general, the computation of net income (less deficit) can be shown as follows:

Begin With: Total Receipts
(Includes Business Receipts)

Less: Total Deductions

(Includes Cost of Goods Sold)

Equals: Total Receipts Less Total Deductions Plus: Constructive Taxable Income from

Related Foreign Corporations

Less: Tax-exempt Interest on State and Local Government Obligations

Equals: Net Income (Less Deficit)

[10] For the most recent detailed information on transactions between "foreign-owned domestic corporations" and their related foreign persons, see "Transactions Between Large Foreign-Owned Domestic Corporations and Related Foreign Persons, 1996," Statistics of Income Bulletin, Fall 1999, Volume 19, Number 2. Unfortunately, the data contained in that article are not completely comparable to the data contained in this article. For instance, the statistics contained in that article are for U.S. corporations that were owned (25 percent or more) by a foreign person. By contrast, the foreign ownership level used for the FCDC statistics shown in this article was 50 percent or more. Additionally, returns included in the "foreign-owned" study showed total receipts of \$500 million or more and reported transactions with related foreign persons on Form 5472, Information Return of a 25 Percent Foreign-Owned U.S. Corporation or a Foreign Corporation Engaged in a U.S. Trade or Business. Neither of these conditions was a requirement for inclusion in the FCDC study.

- [11] The 33,026 companies reporting a deficit may include a small number of "break-even" companies, i.e., those whose receipts and deductions were equal.
- [12] Most, if not all, of the largest FCDC's and other domestic corporations were selected for this study at the 100-percent sampling rate. Therefore, sampling error is not considered to be a major concern for the large-corporation data. A complete discussion on sampling rates is presented in *Statistics of Income—1996*, *Corporation Income Tax Returns*.
- [13] One focus of this article is U.S. total income tax after credits. Total worldwide taxes may be approximated by adding the foreign tax credits claimed by corporations to the U.S. tax liabilities (i.e., total income tax after credits) of these corporations. Using this procedure, the foreign tax credit approximates the foreign tax liabilities of the corporations. Tables 1 and 2 show amounts of foreign tax credits in addition to U.S. total income tax after credits.
- [14] Dates of incorporation are reported, for example, on Form 1120, page 1, question C.
- [15] See Grubert, Harry, "Another Look at the Low Taxable Income of Foreign-Controlled Companies in the United States," U.S. Department of the Treasury, Office of Tax Analysis, Paper 74, 1997, and "Tax Administration: Foreign- and U.S.-Controlled Corporations That Did Not Pay U.S. Income Taxes, 1989-95," U.S. General Accounting Office, GAO/GGD-99-39, March 1999.
- [16] On Form 1120, Page 3, Schedule K, the actual questions were: "(10) Did one foreign person at

- any time during the tax year own, directly or indirectly, at least 25 percent of: (a) the total voting power of all classes of stock of the corporation entitled to vote, or (b) the total value of all classes of stock of the corporation?" and "(10a) If 'Yes,' enter percentage owned." There was an additional question used for the country distribution of these statistics, which was: "(10b) If 'Yes,' enter owner's country."
- [17] Returns for this study may exclude certain domestic companies that are effectively controlled by foreign persons, such as public companies in which "control" may be exercised with as little as 10 percent to 20 percent of the stock holdings.
- [18] Statistics of Income also compiles data on domestic corporations with 25-percent to 49percent foreign ownership. If a company was classified as an FCDC based on 50-percent or more foreign stock ownership, then it was not included in the 25-percent to 49-percent foreign ownership category, even if it had an unrelated foreign owner with 25-percent to 49-percent stock ownership. For 1996, there were only 3,565 returns that indicated a level of foreign ownership between 25 percent and 49 percent. These companies reported \$163.2 billion of assets, \$85.7 billion of receipts, \$3.3 billion of taxable income, and \$0.9 billion of total income tax after credits. All of these amounts were small in comparison to data for the FCDC's.
- [19] The FCDC statistics include data from returns in which the first question (see footnote 16) was answered "Yes," and the second question covering percentage owned was not answered.

^{*}Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ Includes industrial groups or countries, as appropriate, not specifically listed.

² Excludes interest received on State and local Government obligations, which totaled \$671 million.

NOTES: This table presents separate data for the eight largest countries, based on 1996 total assets at the all-industries level. Also, this table presents separate data for the four industrial groups that accounted for 86 percent of the number of returns, 93 percent of the assets, and 89 percent of the receipts for all foreign-controlled domestic corporations. Percentages were calculated using rounded data. Detail may not add to totals because of rounding.

^{**} Not shown to avoid disclosure of information about specific corporations. However, the data are included in the appropriate totals.

¹ Includes industrial groups or countries, as appropriate, not specifically listed.

² Excludes interest received on State and local Government obligations, which totaled \$37 billion for large domestic corporations not foreign controlled, and \$641 million for large foreign-controlled domestic corporations.

³ For money amounts, less than \$500,000. For percentages, less than 0.005 percent (positive or negative).

NOTES: This table presents separate data for the seven largest countries, based on total receipts for 1996, at the all-industries level. "Large" corporations are those with total assets of \$250,000,000 or more, and/or with business receipts of \$50,000,000 or more (total receipts were used in lieu of business receipts for the finance, insurance, and real estate division). Form 1120S data are excluded from this table. "New" corporations were those with dates of incorporation between 1994 and 1997; "old" corporations were those with dates of incorporation prior to 1994. Percentages were calculated using rounded data. Detail may not add to totals because of rounding
